

New Moisture Management Solutions from the Fortifiber Building Systems Group®

Fortifiber introduces FortiBoard™ Tape, a vapor permeable tape for use with all of Fortifiber's surface protection products, including FortiBoard, Seekure®, Orange Label Sisalkraft®, Utility and Red Rosin papers. The tape provides excellent tensile strength and delivers a strong adhesive bond at the seams.

FortiBoard Tape

FortiBoard tape is manufactured from natural kraft paper and a rubber-based adhesive. It has a moisture vapor permeance of >6 perms, so it won't trap moisture, helping to reduce or prevent cure lines in concrete as well as blotchy finishes in curing floors. Yet it also delivers a minimum of 16 hours of moisture resistance, so it can stand up to spills and heavy traffic. Its tough backing remains strong even under moist conditions.

Product Packaging

FortiBoard Tape is available in a wide 2.835" x 164' (72 mm x 50 m) roll for easy application, weighing approximately 1 lb., 16 rolls per carton. Thickness is 8 mils.

Applicable Standards

FortiBoard Tape qualifies as a Class III Permeable Vapor Retarder by the IBC and IRC.

Physical Properties*

Characteristic	Test Method	Results
Moisture Vapor Transmission	ASTM E-96	>6 perms
Water Resistance	ASTM D-779	16 hours min.
*Tape on FortiBoard		

FortiBoard Tape is distributed by the Fortifiber Building Systems Group. With more than a seventy-five year history of proven performance, technical expertise and practical know-how, the company has established itself in the building industry as a trusted partner.
